Arm	Disease named	Retrieved text	Role
A1	none	none	fair baseline (same answer style)
A2	none	from the question alone	oracle subset: shows why disease matters
A3	true disease (oracle)	none	upper bound: value of knowing the disease
A4	true disease (oracle)	yes	upper bound: value of retrieval
A5	model's own guess	none	real: guess alone
A6	model's own guess	yes	the system

oracle arms use SLAKE's own label: upper bounds, never reported as the result

real arms use only what the model outputs
